

INSTA SIGNAL WEBSITE

We are seeking an experienced and talented Full Stack Web Developer to develop a website for automating trades with specific features and functionalities. As a freelancer, you will be responsible for building a robust and user-friendly website that integrates with Binance API2 and TradingView, allowing users to automate trades and access profitable strategies. The project has a timeline of 30-60 days, with demos every 15 days. We divide it into 2 milestones.

1 - Features :

- **Signup/ Sign in** with email and password and for sure the user will have accept our privacy policy and terms of conditions line above the signup button
 - **Forget Password:** the user can reset his password if he forgot it by email Verification by email when signup by sending an **OTP** to the email
 - **Dashboard** : It will contain the profit and lost in the last 7 days, 30 days and overall of all the trades and the unrealized P/L per dollar and per BTC. It will display also all the trades in progress and the user can filter by exchange or by date. On the header of this screen we will display also shortcuts for the main feature of the website which are :
 - 1 : Automate Trading View Signals
 - 2 : Automate Telegram Signals using AI (chat GPT)
 - 3 : Automate trade for TradingView Accounts without PRO and PRO+ subscription
 - 4 : Follow other traders on the website
 - **My Analytics** : it will display the history of all trades :
 - *exchange
 - *pair
 - *profit/loss
 - *start datetime/end date time
 - *trade quantity, trade quantity on \$
 - *entry price and closed price
 - *origin of signal from trading view or telegram or copied from another user)
 - * Trade status (succeed , or Failed) and Failure reason if failedThe user can filter the list by exchange or by pairs or by date.
It will display a chart for user Profit/Loss and the user can filter the chart by Day/Week/ Month/Year and can filter also by exchange.
 - **Trading View Automation** : It will display all the instructions to connect trading view to the website to automate signals to brokers like Binance, kucoin, OKX, Bybit...
Example : <https://tradeadapter.com/instructions>
It will contains also How to connect TradingView with Broker using Insta Signal "Email Alert" Example : <https://tradeadapter.com/faq/how-to-configure-tradingview-sms-email-for-trading-alerts>.
- Note :**
- **Telegram Signals Automation** : in this section the user will connect his telegram to insta signal, once succeed we will display to him all the groups on which he is subscribed, he will choose one group to connect. Once done, any signal comes from this group will be sent to **chat GPT** api to retrieve all the information of the signal (entry price, stop loss price, targets, direction , pair). The user can test one signal by copying a signal from the telegram channel and pasting it on insta signal and click on button "**Verify**" to verify if the signal is well interpreted by the AI. If it is not verified we will display "Our AI cannot detect the signal, please try another model of signals or try to contact the signal provider.", otherwise the signal will be provided, and the user will be

asker to finish the configuration by setting information like

- * Leverage
 - * Trades per day
 - * Money to put by trade it can be fixed or by percentage
 - * stop loss per day
 - * take profit per day
 - * spot or futures (the user should use just one option)
 - * cross or isolate if futures is chosen (the user should use just one option)
 - * Market or Limit (the user should use just one option)
 - * Trailing Take profit (**Trailing Take Profit allows the trade to remain open and continue to profit as long as the price is moving in the investor's favor. If the price changes direction and the change surpasses the previously set percentage the order will be closed.**)
- Example :** Take profit 1 : 20%
Take profit 2 : 30%
Take profit 3 : 20%
Take profit 4 : 20%
Take profit 5 : 10%
- So in this case the user will use a good risk management :)
- Finally the user will choose the broker and put the broker api key and api secret and he will confirm by clicking on the button **"Start Telegram Bot"**
- **FAQ :** in this section we will display all the frequent asked question and the frequent issues **Example :** <https://tradeadapter.com/faq>
 - **Marketplace :** in this section we will display all the users that are subscribed on insta signal with their period profit and a chart, and the connected user can follow this user to enter the same trades as the followed user (**see the screenshot 1**)

Screenshot 1

The user can follow paid accounts or free accounts, if he will follow paid account we will get 10% of the price for example in this example the price is 10\$ so the website will get 0.5\$ commission. And the user will get a screen to configure his settings (**see screenshot**
